

The grounding of the network cabinet can be connected to a socket

Overview

Each cabinet must be equipped with an earthing bar or a ground reference metal sheet. All shielded cables and external protection circuits must be connected to this point. Bonding (or grounding) is a system of protective measures, which is implemented to prevent electric shocks when touching metal parts of energy-powered equipment. The M6 lug (the end with a larger hole) of the ground cable can be connected to a ground point on the cabinet/rack or a ground bar, depending on the. ed grounding kits shall be UL Listed, CSA Certified and RoHS compliant. Grounding strip shall comply with EIA niversal mounting hole spacing and mount to standard racks and cabinets. It should include the following components: Supplementary Bonding Grid (SBG): This grid, made of copper, should be placed at 600mm to 3m centers, covering the entire. At the center of most telecom cabinet grounding systems is the grounding busbar.
