

Unplug the fiber optic cable from the China Unicom router

AI Overview

To safely disconnect a fiber optic cable from your China Unicom router, power down the device, identify the connector type, release the locking mechanism, and pull the connector straight out without bending the cable.

Step-by-Step Instructions

1. Power Down the Router Unplug the router from its electrical source to eliminate the risk of exposure to infrared light and protect internal components from damage during disconnection . 2. Prepare Your Workspace Ensure the area around the router is clean and free of dust or debris, as even microscopic particles can damage the fiber tip . 3. Identify the Connector Type Common residential fiber connectors include:

- SC (Subscriber Connector): Rectangular, push-pull design with a plastic tab.
- LC (Lucent Connector): Smaller, uses a clip or latch that must be pressed.
- ST: Twist-and-lock bayonet style.
- FC: Screw-on type. Knowing the connector type helps you release it correctly without applying excessive force . 4. Release the Connector
- For SC connectors, gently depress the plastic tab on top to unlock.
- For LC connectors, squeeze the clip inward toward the connector body.
