

Weight of FRP Cable Tray

AI Overview

FRP cable trays typically weigh between 10 kg/m and 50 kg/m depending on type and side runner height.

Weight by Side Runner Height

FRP cable trays are manufactured in various side runner heights, which directly affect their weight per meter. Common weights for standard FRP trays are:

- 10 kg/m – Small side runner height, light-duty applications
- 12 kg/m – Slightly higher side runners for moderate loads
- 15 kg/m – Medium-duty trays
- 18 kg/m – Medium-heavy duty
- 25 kg/m – Heavy-duty applications
- 30 kg/m – High load-bearing trays
- 40 kg/m – Extra heavy-duty, industrial use
- 45 kg/m – Very high load, large cable bundles
- 50 kg/m – Maximum load-bearing, large industrial installations

Factors Affecting Weight

- Tray Type: Ladder-type trays are generally lighter than solid-bottom or channel trays due to open rungs, while solid-bottom trays provide full cable protection and are heavier.
