

What is a three-level or two-level distribution box

Overview

Three level distribution refers to the general distribution box, distribution box, switch box. It is specially designed for the special situation of the project construction site and meets the relevant construction power specifications and standards of the. The first, second, and third-level distribution cabinets are common classifications in power systems, primarily categorized based on their position and function within the power supply system. Let's make an example for clarity: A newly constructed residential area introduces a 10kV power line to a substation. From the transformer's low-voltage side (0.4kV), power is distributed to a main distribution panel.
