

What is the tee bend in a cable tray called

Overview

A wiremesh cable tray TEE is a fitting used in wiremesh cable tray systems to create a branch or junction in the cable routing. It is shaped like the letter "T" and connects the main tray to a branch tray, allowing cables to be organized in three different directions. Whether distributing power to equipment rooms, routing network cables in a data center, or feeding production machinery in a manufacturing. Cable tray fittings are essential components used to connect, support, and transition cable trays through different directions, levels, and termination points. Whether your system uses ladder cable trays, perforated trays, wire mesh trays, FRP, aluminum, stainless steel, or galvanized steel, these. These fittings, often referred to as T-pieces or three-way junctions, allow for a 90-degree lateral takeoff from the main cable tray run, enabling efficient distribution of power, control, and instrumentation ca.
