

What is xFD a distribution box

AI Overview

The xFD distribution box, such as the UTAH-100/XFD, is a specialized platform for distributing digital video signals with high flexibility and minimal latency.

Overview

An xFD distribution box is a type of distribution platform designed to manage and distribute multiple digital signals efficiently. The UTAH-100/XFD, for example, is a compact 2-RU frame that can handle up to 32 reclocked, point-to-point 3G-SDI signals in a single rack unit, supporting mixed signal formats and providing bit-for-bit quality for uncompressed signals with virtually zero latency . It is widely used in broadcast environments, stadiums, and outside broadcast setups.

Key Features

- **Modular Design:** Houses up to four FLEX-I/O modules, each capable of handling multiple independent signal channels .
- **AutoSFP Technology:** Automatically configures the system for different SFP types, simplifying setup and reducing operational costs .
- **CWDM Support:** Can support up to 16 CWDM channels, allowing for optical redundancy and extended signal reach .
- **Compact and Flexible:** Compared to traditional 2-RU systems, it offers a smaller footprint while maintaining high versatility and easy maintenance .
