

What router can connect to a fiber optic router

AI Overview

Any high-performance router that supports multi-gigabit speeds, Wi-Fi 6 or 7, and has sufficient LAN ports can connect to a fiber optic router.

Key Considerations for Fiber-Compatible Routers

- **Speed Support:** Fiber internet often delivers speeds of 1 Gbps or higher, so your router should support at least 1 Gbps throughput. For multi-gig fiber plans, routers with multi-gigabit Ethernet ports and Wi-Fi 6 or 7 standards are recommended .
- **Wi-Fi Standard:** Wi-Fi 6 (802.11ax) and Wi-Fi 7 routers provide faster speeds, lower latency, and better handling of multiple devices compared to older Wi-Fi 5 (802.11ac) routers .
- **Coverage and Range:** Choose a router that matches your home or office size. Dual-band or tri-band routers, or mesh systems, help eliminate dead zones and maintain stable connections across multiple floors or large areas .
- **LAN Ports:** Routers with multiple Ethernet ports allow direct wired connections for gaming consoles, desktops, or smart home hubs. Some routers also support LAN aggregation for higher combined speeds .

Recommended Routers for Fiber Internet

- **Netgear Nighthawk RS700S (Wi-Fi 7):** Supports multi-gig speeds up to 10 Gbps, covers up to 3,500 sq. ft., and handles up to 200 devices. Ideal for gaming, streaming, and large offices .
