

Which type of carbon fiber frame with internal cable routing is recommended

Overview

For many European and American cyclists, internal cable routing isn't just about looking neater; it offers greater aerodynamic benefits, less cable interference, and reduced maintenance, making it particularly well-suited for light bicycle carbon construction platforms. Top brands like Specialized. Mountain biking technology constantly evolves, and one debate among riders is whether to choose a frame with full internal cable routing. Unlike. Lightweight carbon construction (frame around 1,130g, fork 370g) delivers responsive handling and efficient power transfer on climbs and sprints. The type of internal routing system used depends heavily on the drivetrain and braking technology.
