

Wiring Method for Indoor Household Distribution Boxes

AI Overview

Indoor household distribution boxes should be wired with proper grounding, correct breaker selection, and organized cable management to ensure safety, compliance, and reliable operation.

Key Components of a Distribution Box

A typical indoor distribution box, also called a consumer unit or DB, includes the following components:

- Main Isolator/Double Pole MCB: Acts as the primary switch to disconnect both live and neutral lines.
- Residual Current Device (RCD/RCCB): Protects against leakage currents and electric shocks.
- Miniature Circuit Breakers (MCBs): Protect individual circuits from overloads and short circuits.
- Busbars: Distribute incoming power to branch circuits.
- Neutral and Earth Bars: Collect return currents and provide grounding for safety .

Placement and Installation

- Install the box in a dry, accessible area with good ventilation, typically at a height of around 1.5 meters from the floor .
